Inquiries from the press averaging daily; appeared frequently on television (BBC, Nova, etc.), radio (NPR, etc.), print (NYTimes, etc.); arguably one of the most active voices in translation of Earth sciences to the popular press.

Numerous and high-impact public presentations, over 1000 in total.

294 refereed publications (and over 60 additional publications including books and popularizations), most first-authored by me or advisees; listed as a “Highly Cited” researcher by ISI’s Web of Science (h=72, and almost 19,000 indexed citations, well over 20,000 in a Cited Reference Search) (higher numbers on Google Scholar).

Main research contributions (personal, with students and post-docs):

Provided key data and interpretations helping demonstrate that regional to global climate changes larger than any experienced by agricultural or industrial humans have occurred repeatedly, in decades to as little as a single year; helped reveal mechanisms and possibility of recurrence;

Through data analysis and modeling of ice sheets and glaciers, helped understand ice-bed interactions with implications for flow changes affecting sea level, and for interpretation of geological records, climatic changes and mountain-belt evolution;

Contributed extensively to the toolbox for measurement of ice-core properties, and accurate and confident conversion to well-dated histories of temperature, accumulation rate, and other paleoclimatic variables.
